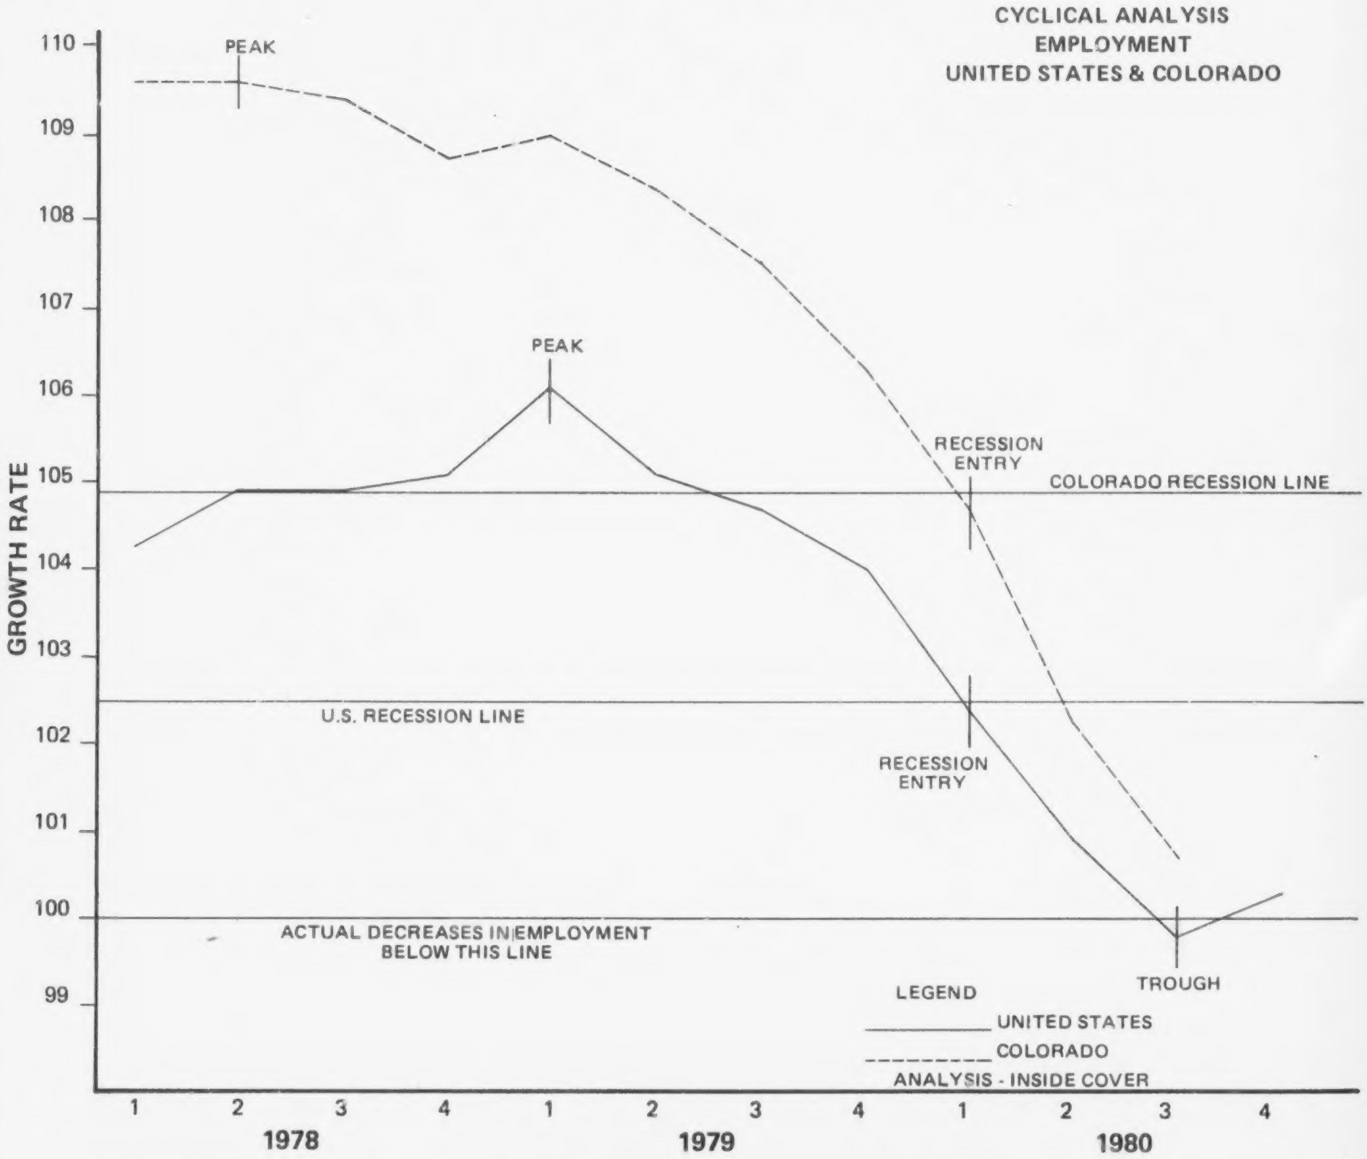
ANNUAL PLANNING INFORMATION REPORT

FISCAL YEAR 1982



CYCLICAL ANALYSIS
EMPLOYMENT
UNITED STATES & COLORADO

JOB SERVICE OF COLORADO
DIVISION OF EMPLOYMENT & TRAINING

Colorado Division of Employment and Training
251 East 12th Avenue/Denver, Colorado 80203

The line graph on the front cover of the API Report portrays the national and Colorado business cycles in terms of the changes occurring in the over-the-year growth rates for private nonfarm and federal government wage and salary employment. The line depicting each economy defines certain points in the downward portion of the business cycle, i.e., peak, recession entry, and trough. The analysis is based on changes derived from the ES-202 "Covered Employment" series for Colorado, and on figures published by the Bureau of Labor Statistics in its Employment and Earnings publication covering the national economy.

As the name implies, the peak of a cycle defines the highest point of activity from the previous trough (the low point of a cycle) and marks the beginning of the downward portion of the new adjustment period. Recession entry defines that point on the graph where the line depicting each business cycle passes through the economy's average point of growth. This average growth is computed as the mean of the compound rates experienced by each economy for the period 1975 through 1980. The trough of a cycle marks the lowest point of the adjustment period and also marks the beginning of the recovery stage of the cycle.

As the graph indicates, the U.S. economy reached its highest period of growth during the first quarter of 1979, entered the recessionary phase of its cycle during the first quarter of 1980, and bottomed out during the third quarter of that same year. The Colorado economy reached its high point during the second quarter of 1978 (some nine months before the U.S. economy peaked) and entered its recessionary phase during the same quarter as the U.S. experience. Although fourth quarter 1980 data is not yet available for the ES-202 series, it is estimated that the Colorado economy also reached the low point of its current business cycle during the third quarter of last year.

Given this method for measuring business cycles and the preliminary data currently available, both economies continue to operate in the recessionary phase of their respective cycles (although in the recovery side of that phase). Given the forecasts that follow in the main body of this report, both economies are expected to remain in this phase well into 1982.*

**The complete business cycle being described here is composed of three phases: 1) a deceleration phase (peak to recession entry); 2) a recessionary phase made up of two stages (an entry-to-trough contraction stage and a trough-to-exit recovery stage); and 3) an acceleration phase (recession exit to new peak).*

PREFACE

This publication was prepared by the Labor Market Information Branch of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is one of several reports published periodically and provides historical, current, and projected labor market information, including the outlook of the national and Colorado economies, as well as population and labor force estimates, industry and occupational employment outlook, and an analysis of job openings received and services to registered applicants in Colorado Job Service Centers.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job-training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

HIGHLIGHTS OF THE COLORADO ECONOMY
FY 1982

- Population growth will moderate; projected population of 3,029,310 will comprise 51% females and approximately 18.5% minorities.

- 1979 per capita income ($9114) is approximately four percent greater than the United States average. The median income for a four-person family in Colorado is estimated at $25,223, exceeding the national average by 12.5%.

- The March 1981 Consumer Price Index for the Denver-Boulder area was 281.4, a 10.3% increase over March 1980. The March 1981 U.S. index was 265.1, posting a 10.6% increase over the previous year.

- The estimated labor force of 1,557,950 indicates a participation rate of 68.9% for FY 1982. An unemployment rate of 3.3% indicates that small changes are expected in both employment and unemployment during FY 1982.

- Generation of new job opportunities will be influenced by national economic developments relative to interest rates, inflation, and budgetary emphases. A moderate 3.5% growth rate in private nonagricultural wage and salary employment is anticipated, with mining leading all industry sectors.

- Professional-technical and clerical occupational skills will dominate the occupational demands in both Colorado and the United States.

- Approximately 290,000 applicants were available for services from CDET during FY 1980. There was an approximate 11% increase in new and renewed applicants. Testing, training enrollments, and placements in jobs paying $4.00 per hour and more increased. All other services posted decreases in FY 1980 as compared to FY 1979.

- Services to special worker groups were positive and improved over previous years, except for females. Improvements in placement and the level of wages at which females are placed must be improved considerably if equity of service is to be achieved for this special class of workers.

- Recommendations for improved services at local Job Service Centers are increased job development, increased outreach, increased file search, and increased job openings through broader penetration of employers.

PROFILE OF COLORADO

The 104,247 square miles that comprise the state of Colorado are divided by the Rocky Mountains, approximately one-third is west of and two-thirds are east of the Continental Divide.

Much of the waterfall flows westerly and away from the densely-populated Eastern Slope.

The eastern plains are reasonably fertile and have been developed for irrigated crop and pasture land. The Arkansas River Valley and the South Platte River Valley comprise the major irrigated land areas. Weld County is one of the most highly-developed and productive agricultural counties in Colorado.

Mineral resources in the eastern half of the state include outcroppings of sandstone, limestone, and siltstone, and subsurface resources include oil, gas, and coal. Construction gravel is mined in many areas.

The high mountain valleys and basins are developed for pasture, hay, grains, fruit, and vegetable crops. The area running southeast from Mesa County produces major quantities of high-quality peaches, pears, and apples. The San Luis Valley in the south central portion of the state is a major producer of potatoes and other truck-garden crops.

Mineral resources are available in the western half of the state; oil, coal, molybdenum, and uranium are the major minerals that are produced.

The state is composed of thirteen planning regions, each region being defined as a homogeneous geographic area sharing common physical, economic, and sociological problems, resources, and goals.

The eastern plains, comprised of Regions 1, 5, and 6, represent less than five percent of the state's population in 1980. Region 6, the extreme southeastern portion of the state, experienced a 4.7% decrease in population during the period 1970 to 1980. Region 1 grew by 6.3% and Region 5 by 13.6%, as compared to the state growth of 30.2% during that decade. Population growth for these areas will continue to be slow, and perhaps will show even more of a loss during the 1980's, with the exception of western Elbert County in Region 5. This area is approximately 35 to 45 miles from metropolitan Denver and therefore attracts commuters; it is the only county in these three planning regions whose population grew (from 1402 in 1970 to 2715 in 1980) during the past decade. It can be expected that this growth will continue during the early 1980's.

Agriculture continues to be the major industry in these counties, comprising approximately 20% of the employment. Trade and government are the second and third largest industry employment sectors in these regions. Fiscal Year 1982 should reflect moderate growth, since it is anticipated that food prices will not fall drastically, guaranteeing good prices for livestock and crops. The continued high cost of energy and fertilizer, however, could reduce the profit margins.

Per capita income for Region 1 in 1979 was $10,027, $8069 in Region 5, and $7308 in Region 6. The state average was $9114.

Region 2 (the northern Front Range) comprises two fast-growing areas, Larimer and Weld Counties. This area increased its population from 1970 to 1980 by approximately 93,000 or 52%, as compared with the state increase of 30.2%. As stated above, Weld County is the most highly-developed agricultural county in Colorado, but this region is also responsive to the growth of electronics manufacturing. Manufacturing, trade, and government are the leading nonagricultural industry sectors in this region. Per capita income averaged $7763 in 1979 and should continue to increase at a moderate pace. Long-term projections are still estimating greater growth in this Front Range Region than in *other parts of the state, but the region will follow the state pattern of moderate population and employment increases.*

Region 3 is comprised of metropolitan Denver. Approximately 64% of the state's nonagricultural employment occurs in this region. The region comprises 56% of the state's population. In 1979, the per capita income of $10,133 exceeded the state's average of $9114. Trade, services, and government industry sectors record approximately 63% of the total nonagricultural employment in Region 3. Although the mining sector reflects the smallest number employed, this industry has been the fastest-growing in the metropolitan area. Much of this growth can be attributed to the headquartering of energy-oriented establishments in Denver, as well as to the production of molybdenum in Clear Creek County.

This area has been experiencing excessive consumer price increases in housing, energy, and food primarily, resulting in a Consumer Price Index that has been consistently higher than the U.S. city average and second only to San Diego, California's. The outlook for this region is continued growth at a slower pace, inasmuch as population growth through immigration is expected to moderate, along with downtown-office and technological-center building, during the 1980-1982 period. It is estimated that the Fiscal Year 1982 unemployment rate will be about three percent, reflecting a healthy economy.

Region 4 is the Pike's Peak region. Population increased in this region at the same level as the state's, about 33% between 1970 and 1980. Nonagricultural employment growth also reflected the same rate as the state's. Government, trade, and services represent approximately 71% of total nonagricultural employment. Statewide, these three industry sectors represent approximately 65% of total employment. Per capita income for the region in 1979 was $6205, but the major county (El Paso) had a per capita income of $8060.

The possibility of better-than-average growth looms if *defense outlays are increased nationally for FY 1982, since this region's major employer is government. This employment growth, coupled with a continued trend of electronic firms' locating in this area would contribute to increases in population, employment, income, and retail sales.*

Region 7 (the Spanish Peaks area) posted a minimal population growth of 4.6% from 1970 to 1980. Pueblo city and county dominate the economic activity of this region, and that area gained only 7500 people. The steel industry dominates the employment in this region, and area employment has grown at a slower pace than the state's. Per capita income in 1979 was approximately $6800, well below the state average of $9114. The estimated unemployment rate for FY 1982 is 5.4%, somewhat higher than the 3.3% estimate for the state. Economic growth in this region usually lags behind the state's and is expected to continue in that vein.

The southern mountain area consists of these planning regions:

Planning Region 8 - San Luis Valley
Planning Region 9 - San Juan Basin
Planning Region 13 - Upper Arkansas Valley

The San Luis Valley posted the lowest population gain from 1970 to 1980, only 208 persons. About 14% of the employment in this region is agricultural, consisting of farming of crops such as barley, alfalfa, wheat, potatoes, and cantaloupe. In addition, Mineral County produces silver, lead, and zinc. Government and trade are the two major nonfarm employers in this region.

Average per capita income is $6619 for the region; however, Mineral County, the area producing the lead, zinc, etc., posted a $10,356 per capita income in 1979. It is expected that this area will remain stable during the next few years, reflecting very little growth in employment and/or population.

The San Juan Basin (Region 9) increased its *population by approximately 33% during the 1970-1980 decade. Tourism remains the major industry of this extreme southwest region. The industry sectors with the greatest employment are government, trade, and services. Industry was somewhat hurt by the gasoline costs and poor skiing weather in 1980, but it is anticipated that the area will reflect the moderate upturn of the total Colorado economy in FY 1982. The 1979 per capita income for this region was approximately $6163.*

Region 13 (Upper Arkansas Valley) posted a population of 52,121 in 1980, reflecting a 25.6% increase from 1970 to 1980. This region is rich in energy resources ranging from strip-mined and subsurface coal to molybdenum, uranium, limestone, silver, lead, zinc, and copper. The average 1979 per capita income for this region approximated $8170. It is estimated that this region will continue its growth patterns due to its store of natural resources.

Population in Region 10 (the Black Canyon area) grew by 37% from 1970 to 1980. This growth can be attributed primarily to the region's major mineral resources of coal, uranium, and vanadium. Agriculture is responsible for approximately ten percent of total employment in this region. The leading nonfarm employment sectors are government and trade, with services immediately following. The per capita income in 1979 for this region was $5543, well below the state average of $9114. This may be partly attributed to the fact that Hinsdale and Ouray Counties have no significant natural resources or agriculture, and their per capita incomes are significantly lower than those in Delta, Gunnison, and Montrose Counties.

This region has had significant migrant labor problems in the past several years, but their resolution by the U.S. Department of Labor and the farmers should relieve the situation during the next fiscal year.

Due to the energy boom, Region 11 (the Plateau region) has experienced economic growth in the mining *industry second only to the Denver region's. Coal mining (both strip and underground) and uranium and vanadium mining are the current primary energy resources in this region.*

The emergence of the shale-oil-producing industry in this region, particularly in Garfield and Rio Blanco Counties, should result in increased employment in this area.

It appears that during FY 1982 much of the employment growth will be generated in the construction industry, as these energy companies establish their ventures. Oil shale employment will probably not reflect any considerable increase until the 1983-1990 period, as the oil-shale industry matures.

Between 1976 and 1978, mining employment grew by approximately 59%, juxtaposed with a 25% employment increase in total nonagricultural employment. Trade, government, and services are still the top industries, totaling more than 63% of nonfarm employment. Construction employment increased by approximately 59% between 1976 and 1978, reflecting the needs imposed on this region by the energy boom. It is expected that growth in this area will continue through FY 1982 at a healthier pace than in the state.

The fruit-growing sector of Mesa County is expected to continue its performance of past seasons.

Per capita income in 1979 was $8315 for this region and is expected to increase, along with population and employment, in FY 1982. The population increase from 1970 to 1980 was approximately 53% or 42,826 persons.

Region 12 (northern mountain region) posted the greatest population growth from 1970 to 1980 in the state, 88% or 25,467 persons. Per capita income in 1979 was among the highest in the state at $9073. The greatest employment growth in this region has been due to the rapid expansion of coal mining in Jackson, Pitkin, and

Routt Counties. Eagle County is rich in metals such as zinc, lead, copper, and silver, but expansion has not been marked in these mining sectors. In addition to the energy resources, this region is the most popular of all of Colorado's ski areas, as it includes Aspen, Steamboat Springs, Breckenridge, and Snowmass. If the snow falls, the ski industry in this region will prosper.

Growth in this area will be mitigated, due primarily to the overall moderation of growth at both the national and state levels, but FY 1982 will still see growth and expansion in this region.

THE NATIONAL ECONOMY

Combatting the internal problems of inflation, productivity, federal spending, and employment is the primary objective of the new administration.

The administration has clearly enunciated its plans for battling the economic ills facing the American people; the following recommendations deal with the problems of federal outlays as they currently exist.

Taxes: a ten percent reduction in income tax rates in each of the next three years.

Substantially faster tax write-offs for business investments in plants and equipment.

Energy: realignment of the government's synthetic fuels effort.

Reduction in the Energy Department's conservation program.

Reduced federal involvement in the solar energy field.

Environment: moratorium to be placed on funding for local sewage-treatment projects. Elimination of funding for municipal waste-treatment grants. Changes in policies concerning control of hazardous wastes, and changes in the enforcement policies of clean air and clean water legislation.

Natural resources: a) elimination of purchasing of federal park lands and reduced outlays for proposed water projects; b) stepped-up program of leasing of public lands for exploration and development of oil, natural gas, coal, and other energy resources; and c) doubling the number of oil and gas lease sales in Alaska and accelerating current leasing plans for coal and oil shale in the next four years.

Agriculture: a 14% reduction in 1982 food stamp spending, and a 35% slash in school lunch and other child nutrition programs.

Cancellation of dairy price supports. Slashing of Farmer's Home Administration program which aids farmers in the buying of land.

Employment: elimination of 300,000 public service jobs in state and local governments.

Adjustment of program titled "Trade Adjustment Assistance" which helps those who have lost work due to imports.

Abolishment of the "trigger" mechanism under which the unemployed get an additional 13 weeks of unemployment insurance payments. In addition, a work incentive policy of requiring those unemployed and receiving insurance for ninety days or more to take jobs paying less than their previous jobs' wages.

Tightening of eligibility requirements for coal miners' black lung disabilities.

Federal pay: stricter tests for determining employees' pay and fringe benefits' comparability to private sector and state and local government earnings.

Cut staffing levels comparable to cut programs in civilian federal agencies; increase staffing levels for military agencies.

Social Security: elimination of the minimum Social Security benefit would affect some three million retirees. Phasing out of benefits to adult offspring of beneficiaries would affect an additional 800,000.

Adjustment of federal retiree pensions once a year rather than twice a year for inflationary catchup.

Health and welfare: limiting Medicaid and imposing tougher standards and controls on federal welfare aid.

Cutting the federal share of AFDC by requiring consideration of any income earned by a working step-parent.

Closing of the eight public health service hospitals currently providing free medical care for merchant seamen, fishermen, and others.

Ending subsidies paid by the U.S. to support the training of physicians and other health professionals.

Housing: raising rents for 3.3 million low-income families living in federally-subsidized apartments and raising the maximum rents to 30% of the present tenant's income.

Slowing the growth of the current subsidized housing program - a 13% reduction is recommended.

Scrapping loans for housing rehabilitation and abolishing grants to planning organizations for development of self-help programs.

Economic development: killing funds for the Economic Development Administration and regional development commissions.

Combining Urban Development Action grants program with the multipurpose block grants to cities.

Regulatory agencies: proposed elimination of the Federal Trade Commssion and the antitrust arm, the Bureau of Competition.

A cut in the budget of the Consumer Product Safety Commission.

Personnel cuts in the Federal Communications Commission and the Securities and Exchange Commission.

Transportation: sharp reductions in transportation program spending such as mass transit, subway building subsidies, Amtrak, and airports.

Outlay cuts for highways, railroad branch line aid, and small-community airlines service.

Postal service: possible elimination of public service subsidies, which include free mail for the handicapped and reduced rates for nonprofit groups.

Space and science: moderately reduced budgets for NASA and the National Science Foundation.

Public broadcasting: cuts targeted at administrative costs.

Foreign aid: sharp cuts in commitments for foreign aid programs.

Export sales: cutbacks in the U.S. Export-Import Bank's direct-lending programs.

Education: reduced interest subsidy for borrowers in the college-loan program, and freeze-out of applicants from affluent families.

Consolidation of school programs into block grants to states and local educational agencies. Programs to be affected include educational services for handicapped, neglected, and delinquent children, support for school libraries, and aid to poor children with limited English capabilities.

This comprehensive list of federal budget cuts representes legislation that Congress has passed and implemented during the past five decades. The administration is confident that these decisions to cut budget deficits by paring federal programs meet with popular demand.

A Senate resolution of early April 1981 has affirmed this backing by directing sweeping spending cuts for FY 1982 as recommended by the administration.

At this writing (April 1981), the House of Representatives' Budget Committee submitted its own recommendations for the FY 1982 budget, which will reduce income taxes on a one-year basis, reduce the proposed military budget, and plow back recommended budget cuts to the various social programs such as Medicaid, food stamps, student loans, etc.

The final budget sent to the President will most likely be a compromise between the Senate and House factions.

One possible scenario indicates that Congress and the Reagan Administration will institute the following:

a) a one-year tax cut that will put more money into the pockets of the middle-class earners.

b) a military budget very close to that requested by the administration.

c) some cuts in social programs, but not nearly as incisive as those proposed.

d) a continued monetary policy of high interest rates.

It is therefore estimated that FY 1982 will reflect a very flat economy in which very moderate increases in production will be achieved and very moderate decreases in inflation, interest rates, and unemployment will occur.

Based on the above, it is assumed that in FY 1982 the following conditions will exist:

a) the Consumer Price Index will still be at the double-digit level, between 9.5 and 10.5%. Even with some mitigation of energy prices, the high costs of energy, food, transportation, and shelter, plus the possibility of greater production in military areas and less for consumption, and with no programs to control wages and prices, the inflation rate will not abate by any significant degree.

b) the national unemployment rate will average between 7.6 and 7.9%.

It can be assumed that a softness in the economy for the balance of 1981 will be reflected in slow growth in production in most industries, with a possibility of higher unemployment in some industries by year's end, so that the moderate growth anticipated for FY 1982 will not result in any marked decrease in the number of unemployed.

c) 13-week Treasury note interest rates will average between 11.5 and 12.5%, reflecting the slight moderation in inflation and the slow upturn in productivity and employment.

d) gross national product will increase by approximately 2.6 to 2.9%. This slight improvement will be more of a reflection of the psychological effects of the Reagan Administration's programs than of the actual economic effects.

e) oil consumption, OPEC pricing, and production will prove to be very erratic in the next eighteen months. Decreased demand for oil produced by OPEC countries due to the high prices, the availability of oil from non-OPEC oil-producing countries such as Canada and Mexico, and the substitution of coal and natural gas for oil are some of the factors OPEC will be confronted with. Some of the OPEC nations see these facts as signals to drop prices, while others see a drop in production as the way to deal with the problem. The various options open to OPEC will result in a break in the trend of the past few years of periodic price increases.

POPULATION AND LABOR FORCE OUTLOOK, FY 1982

(Note: FY 1982 population estimates are based on the preliminary 1980 Census data for Colorado and its 63 counties. Race/ethnic ratios are based on the Lawrence Berkeley Laboratories Projections Model, as Census data was not available.)

During the 1960-1970 decade, the population of Colorado grew by approximately 25%; in the years between 1970 and 1980, growth accelerated to 30%, a much faster pace than the national rate of 10.8%. The rapid growth of the past twenty years was due to the fact that Colorado offered a very positive "quality of life" environment: excellent climate, recreational facilities such as skiing, fishing, and hunting; relatively moderate food and housing costs; and clean air. These factors attracted jobseekers as well as job producers.

Today, the Front Range, from Larimer and Weld Counties in the northeast to Pueblo County in the southeast, comprises approximately 80% of the state's population. Housing and food costs are among the highest in the country, and pollution problems are as bad or worse than in most large industrial cities. It is estimated that there will be 3,029,310 persons in Colorado in FY 1982; 81.4% will be white nonhispanic, 13.4% will be Hispanic, 3.7% black, and 1.5% will be of other minorities (Indians, Asians, and Pacific Islanders).

The driver's license inmigration and emigration statistics are one measure of net inmigration to Colorado. In 1978, net inmigration peaked at 62,000; in 1979, net inmigration decreased by 10,000, and in 1980, 41,460 inmigrants, or another decrease of 10,000, were recorded.

Approximately 75% of the total population will be 16 years old and over in 1982, juxtaposed with 68.7% in 1970. This change in age distribution reflects the trend toward smaller families and later marriages, and *the increasing number of males and females who are not marrying at all.*

This large proportion of population 16 years old and over is reflected in our anticipated labor force of 1,557,950, and a participation rate of approximately 68.9%. In 1970, the participation rate was 56.9%. The current participation rate for the nation is about 63%.

The participation rate for females in Colorado in 1982 will approximate 60.5%, The 1970 participation rate for women was 38.1%. The male participation rate in 1970 was 72.1% and is estimated to be 78.3% in 1982.

One of the most significant factors in the increased participation rate for females has been the rising number of multiearner families during the 1970's. Almost exclusively, this rise reflects the number of working wives and mothers. Working wives increased from 18.4 million in 1970 to 24 million in 1979 nationally. As for working mothers, 54% of women with children under 18 were in the labor force in 1979, juxtaposed with 42% in 1970. Another striking change during the 1970's is the number of working women who had the principal responsibility for the maintenance and welfare of their families. This phenomenon results from the increased rate of divorce, widowhood, and single parenthood.

It can be expected that the influx of females into the labor force will moderate in the 1980's, but the economic factors of double-digit inflation and the acceptance of options other than housekeeping and childbearing will result in greater permanent attachment to the work force for the female than ever before in our history.

Nonagricultural wage and salary employment posted yearly average gains of about five percent from 1972 to 1979. 1980 growth averaged only 2.5%. It is expected that private nonfarm employment growth in Colorado for FY 1982 will post a moderate 3.5% after a sluggish 1981. Unemployment will average about 3.3%. The trend of *lower unemployment among males and higher unemployment among females will persist. Of the minority groups, blacks, both male and female, will experience the highest unemployment in the state, followed by Indian, Asian, and Hispanic females.*

Occupational distribution for females, despite efforts to infiltrate nontraditional jobs, still finds most women in the health, teaching, clerical, service, and benchwork (assembly and repair) occupations. Males predominate in professional, technical, and managerial, crafts, and operative occupations.

Male-female earnings ratios vary considerably; women's earnings rarely approach parity with men's, even within the same major occupational groups. Significant change in the earnings gap is not expected during FY 1982, but it is hoped that, during the decade of the eighties, the female's share of 62% of men's wages will approach the eighty and ninety percentile.

By the late 1970's, men's and women's educational attainment was the same, although their fields of training remained traditional.

In summary, FY 1982 will post moderate growth in population and labor force. Inflation will still remain high, the earnings gap between males and females will show little improvement, and unemployment of minorities will still be higher than that of the white labor force.

INDUSTRY EMPLOYMENT OUTLOOK
MAJOR DIVISION ANALYSIS*

High interest, inflation, and unemployment rates at the national level will continue to define the basic framework within which the Colorado economy will be operating during fiscal 1982. As has been the case for over a year, the magnitude of these national economic measurements will influence to a substantial degree our ability to generate new job opportunities within our local economy. Growth there will be, of course, but at levels somewhat below the average experienced during the past six years.

From 1973 through 1979, growth in private nonfarm wage and salary jobs in Colorado averaged about 5.1% per year. During the first nine months of 1980, however, that rate dropped to 2.5%, and it is expected to increase only moderately during fiscal 1981 (to 3.0%) and fiscal 1982 (to 3.5%). Given the national economic outlook, where short-term interest rates are expected to range between eleven and thirteen percent, a Consumer Price Index at least at the double-digit level, and average unemployment probably pushing eight percent during the fiscal year that starts next October, the expected 3.5% growth for Colorado may, or course, be overly optimistic.

Whether the fiscal 1982 growth is overstated or understated, it is, of course, an average of the growth rates expected in the eight major industrial divisions comprising private nonfarm employment. How each sector responds to the overall economic outlook depends in part on how the level of effective demand for the products and services of each will be affected by the assumed interest, inflation, and unemployment rates.

Mining

The mining industry has been the star performer in our economy during the past seven years. Since 1973, employment in this sector has grown at an annual compound

---

**Based on ES202 series*

rate of 13.6%. providing over 21,000 new jobs. And these have been goodpaying jobs. For 1980, it is estimated that the average weekly wage in this industry was approximately $500.

Coal has been the leading sector on a relative basis, growing in excess of 20% each year since 1973. Oil and gas extraction, however, has provided the largest number of new job opportunities, in excess of 1500, on the average, since 1973.

Growth rates for fiscal 1981 and 1982 are expected to be moderately below the seven-year average, about twelve and ten percent respectively. Strikes and excessive supplies in the coal mining sector as well as some softening in metal demand will probably drop the rate in the first time period. Lower relative price increases for oil in the international market, continued mitigated demand,and accelerating production costs in the oil and gas extraction sector are expected to drop the rate even more in the second time period. The ten percent anticipated rate in fiscal 1982, however, still means that about 4000 new jobs will be created by the industry during the 1981-82 time frame.

Construction

Since 1973, growth in this industry has ranged from a loss of 12,000 jobs in 1975 to a gain of almost 11,000 in 1978. Directional shifts of this magnitude reflect the high sensitivity of the industry to the changing levels of inflation, interest rates, and unemployment. This sector is also highly sensitive to Congressional decisions that raise or lower the level of actual or subsidized construction that will be supported by the federal government. Minimal growth is expected in construction employment during fiscal 1981. High interest rates and the flight of actual or potential mortgage funds into short-term investment instruments will preclude little if any private-sector-generated growth. The small net growth that is being forecast is expected to be generated by a small expansion in oil-shale activity that is being subsidized directly or indirectly by some type of federal guarantees.

Fiscal 1982 doesn't look much better. Mortgage rates are expected to continue to exceed 12%, and high inflation and high housing demand, to price significant numbers of potential homeowners out of the housing market. Commercial projects will be faced with the same high interest constraints as the residential sector. Most of the 800 to 1000 net growth expected will continue to be supported, for the most part, either directly or indirectly by the public sector.

Manufacturing

Since 1973, manufacturing employment in Colorado has increased by almost 40,000 jobs. Eight out of every ten of these new job opportunities were attributable to either the "machinery, except electrical" sector (industry 35), "electrical and electronic machinery and equipment" (industry 36), or "instruments, photographic and related" (industry 38). For the most part, these are high-technology sectors with markets and competition extending far beyond the boundaries of Colorado. They are also sectors with historically high annual average growth rates when compared with manufacturing as a whole. Yet, they are not "untouchable". The geographically-brood economic downturn which started over a year ago has slowed significantly the job-generating capabilities of these three sectors. Sluggish demand, coupled with increasing international competition in computers, microprocessors, and programmable (automated) production, is expected to keep growth rates moderately below the six-year average for these sectors.

While growth is expected to be slow in some sectors, others will experience higher levels of activity due to expanding defense and space expenditures. "Transportation equipment" (industry 37), for example, should show good growth during Fiscal Years 1981 and 1982.

Overall, the manufacturing industry should provide about 3600 new jobs during the current fiscal year and between four and five thousand jobs during the twelve months starting in October. These levels are somewhat lower than the 5700 annual average since 1973, but, on a relative basis, they will be substantially higher than the growth rates expected at the national level during the same period.

Transportation and Public Utilities

Historically, air transportation, communications, and motor freight transportation have been the leading growth sectors in this major division. Currently, however, a slowing economy, deregulation, high energy prices, and higher productivity gains have affected the growth rates of one or all of these sectors. The historical employment gains of around four percent annually, therefore, are not expected to be maintained during the current fiscal year. About 2000 new job opportunities (a 3.0% gain) are anticipated.

The outlook for this industry in Fiscal Year 1982 appears somewhat better. Employment decreases due to the effects of deregulation should stabilize somewhat. In addition, relatively lower fuel price increases (or even some decreases) should help the air transportation sector during this fiscal year. Employment gains should mirror the historical average previously mentioned.

Wholesale Trade

During the first nine months of 1980, over-the-year growth in this industry dropped from 10.1% in January to 3.3% in September. This downward trend would seem to be reflecting not only concomitant movements associated with national and local business cycles, but also accelerating efforts on the part of retailers to control inventories during periods of high short-term interest rates.

Employment gains in fiscal 1981 and 1982 are expected to be at about the levels experienced during the final quarter of Fiscal Year 1980, around 2800 new jobs. Although short-term interest rates will probably remain quite high during the period, most adjustments to these extraordinary levels have probably already been made.

Further, some form of personal tax relief is expected to be implemented by the first quarter of FY 1982. Retail sales should be buoyed somewhat by these fiscal measures, with limited positive effects on wholesale trade.

Retail Trade

The recession that began nationally and in Colorado during the first quarter of 1980 continues to act as a brake on employment growth in this major division. While an average year will yield a growth of about 10,000 jobs in retail trade, last year (1980) new job opportunities increased by only about 4000.

Some of the problem sectors locally are a reflection of a broader national malaise involving "building materials and hardware" (industry 52) and "automobile dealers and gasoline stations" (industry 55), brought about by high interest, energy, and product prices. Other problem sectors reflect local redundancy or oversupply problems, as for example in the "eating and drinking" sector (industry 58).

Although most of the current problems facing this industry are expected to continue during the next eighteen months, the credit shocks of early 1980 will probably not be repeated during either Fiscal Year 1981 or 1982. In addition, the previously-mentioned personal tax breaks expected to be implemented in early fiscal 1982 should mitigate somewhat any further drop in the retail trade growth rate. New job opportunities, therefore, should move up to about the 5000 level during the current fiscal year, and a further increase to about 6500 new jobs should take place in FY 1982.

Finance, Insurance, and Real Estate

During an average year, "banking" (industry 60), "credit agencies other than banks" (industry 61), and "real estate" (industry 65) will generate three-fourths of all new job opportunities attributable to this industry. But times are changing. The reality of very high inflation and interest rates, coupled with the continuing implementation of the Deregulation and Monetary Control Act of 1980, portends a significant moderation in the job-generating capabilities of these three top performers.

The high cost of housing and money has reduced the real estate sector to growth rates comparable to those experienced during the downturn of 1974 and 1975, i.e., actual job losses are being experienced. To get back to a reasonable level of positive growth, substantial changes must occur in long-term inflation expectations and in current and anticipated levels of long- and short-term interest rates. Short of some permanent income and price control program, little is expected to occur during the next eighteen months to lower, in any meaningful manner, inflation expectations or interest-rate levels.

The deregulation act mentioned above, among other things, deregulates interest rates. This means that rates will be less stable over time and that competition will be increased among the various financial institutions. Both consequences portend a "ringing out" of the less efficient businesses or the merging of these enterprises with larger institutions. The end result is expected to be relatively fewer new employment opportunities in the future compared to historical levels.

Given this background, growth in the current and following fiscal years should be substantially lower than the historical annual average of 3700 new jobs. An employment increase of about 1500 is forecast for this fiscal year, with about 2300 new opportunities expected in Fiscal Year 1982.

Services

We can usually depend on this industry to provide our economy with the most new job opportunities in any given year. Leading sectors in absolute terms would include "business services" (industry 73) with average increases of about 3000, "health services" (industry 80) with annual increases of about 2400 new jobs, and the "hotel, motel" sector (industry 70), up about 1300 annually.

Top new-job performance in this major division is predicated on the fact that it is usually less susceptible to major cyclical downturns than are most of the other divisions already reviewed. For example, during the 1974-1975 economic adjustment, total private nonfarm employment in Colorado experienced negative growth rates for about a year. Services employment, on the other hand, was expanding at about a four percent rate during the same period.

New opportunities should move up by between four and five percent during each of the two time periods being reviewed. This percentage rate of growth would translate into about ten to twelve thousand new openings in each fiscal year.

MAJOR INDUSTRY DIVISION FORECAST*
FY 1981-1982

	(Actual) Fiscal 1980	(Forecast) Fiscal 1981	(Forecast) Fiscal 1982
Mining	34600	38800	42700
Construction	77200	77600	78500
Manufacturing	180200	183800	188400
Transportation and public utilities	69900	71900	74900
Wholesale trade	74800	77500	80300
Retail trade	229800	234800	241300
Finance, insurance, and real estate	76700	78200	80500
Services	233900	244000	255000
Total	977100	1006600	1041600

*Based on ES202 series

OCCUPATIONAL EMPLOYMENT OUTLOOK

Approximately 35,000 new private nonagricultural wage and salary jobs will be generated during Fiscal Year 1982 in Colorado. This change in employment represents only one part of the demand for workers in occupations. Replacement of workers due to death, retirement, temporary leave from the labor force, or transfer to other occupations or to other geographic areas also creates job openings. In fact, it is estimated that national replacement needs resulting from deaths and retirements alone are usually double the number of openings due to growth. Additionally, despite the lack of specific statistical data, national research findings indicate that occupational transfers and temporary labor force separations are a larger source of job openings than employment growth, death, and retirements combined. Research further indicates that the number of occupational transfers varies inversely with the amount of training required in an occupation.

Current projection programs address growth, deaths, and retirements. Research is continuing on the best way to improve methods for gathering data on occupational transfers and temporary leaves from the labor force.

Currently, the most well-developed projection methodology is that which uses the Occupational Employment Statistics (OES) survey program, a federal-state cooperative project funded under CETA-LMI (Title III, Section 312) by the ETA, with technical review by the BLS, and published by the CDET.

This program, through regular surveys of industry establishments in the state, generates staffing patterns within industry sectors and then aggregates them to a total occupational staffing pattern within the state.

The distribution of major occupational categories in 1982 in Colorado, and in the U.S. in 1980, reflects the following proportions and rank:

Nonagricultural wage and salary	Estimated 1982 Colorado	Rank	Actual 1980 U.S.	Rank
All occupations	100.0%	--	100.0%	--
Professional, technical, and kindred	17.8%	2	16.5%	2
Managers	9.6%	6	11.5%	6
Sales	6.6%	7	6.5%	7
Clerical	20.4%	1	19.1%	1
Crafts	11.9%	4	13.2%	5
Operatives	11.4%	5	14.6%	3
Service workers	16.4%	3	13.7%	4
Laborers, except farm	5.9%	8	4.7%	8

Clerical occupations rank first in both Colorado and the U.S., and the professional, technical, and kindred occupations are second in both areas. Third- and fourth-ranking occupations in Colorado are service and crafts workers, with operatives a close fifth. In the U.S., operatives rank third, with service workers and crafts fourth and fifth. Sixth, seventh, and eighth are the same groups for both areas. The differences reflect the specific regional needs of Colorado juxtaposed with those of the U.S. as a whole.

Another yardstick that can be used in determining career choices and/or implementation of training programs to meet employment demand is to look at those occupational categories showing the greatest growth. In this instance, the Colorado projections program lists approximately twenty detailed occupations, each of which will account for one thousand or more job openings in 1982:

Occupational title	Number of job openings
Sales workers	6587
Stenos, typists, secretaries	4120
Teachers	3433
Sales clerks	2940
Waiters	2696

Occupational title	Number of job openings
General clerks, office	2372
Bookkeepers	2011
Cashiers	1564
Cooks, except private	1506
Engineering, science technicians	1322
Engineers	1310
Managers, store	1289
Health technologists and technicians	1264
Truckdriving occupations	1263
Nursing assistant occupations	1209
Stock clerks, storekeepers	1141
Nurses and physician's assistants	1131
Accounting occupations	1070
Blue-collar-worker supervisors	1019

However, before career choices can be made, and training programs are implemented, the supply side of the occupational demand/supply equation must be evaluated. Total demand for jobs must be matched with the occupational skills of persons seeking jobs. If this is not accomplished, the job market could result in too many persons in occupations for which there is little demand, and too many jobs available for skills that are not represented in the labor force.

Determining occupational supply does not lend itself as easily to projection models as does the demand side, because supply is too fluid, flexible, and subject to change.

We know that supply comes from structured training programs such as public and private vocational schools, apprenticeship programs, federal employment and training programs, armed forces training, community and junior colleges, colleges and universities, and employer training programs.

We also know that the potential supply of workers for any occupation consists of persons currently employed in that field, plus graduates of programs specifically designed to train workers for such occupations, persons from training programs in related fields, or persons who possess the necessary qualifications but are either unemployed, not in the labor force, or are employed in other occupations. And finally, they may be persons who will immigrate.

Adequate analysis of supply is increasingly difficult, because 1) college graduates are motivated to enter their fields of specialization or related fields when seeking employment, depending on the demand, wages, and benefits; 2) many people take jobs which offer on-the-job training and which are unrelated to the training they completed; and 3) many workers possess entry-level skills for a multitude of jobs, such as receptionist, assembler, and retail clerk, for which no training was obtained.

One large source of information concerning unemployed persons is the Employment Service Automated Reporting System (ESARS). In FY 1978, more than 15 million people registered with Job Service Centers nationally seeking job-related services. Approximately 95% of these applicants were unemployed. In calendar year 1978, over 17 million persons were unemployed, implying that Job Service Centers register a substantial portion of labor supply.

Just as the demand projections do not encompass all demand, the available supply data does not define the entire supply. However, analysts in the LMI Branch are researching a method of measurement using the available supply and demand information for determining a workable analysis of the local labor market for short-term projections of supply and demand. (This information will be published in the near future in a quarterly supply/demand report.)

SPECIAL WORKER GROUPS IN THE LABOR FORCE

Education, training, and experience are not always the keys to finding jobs in the labor market. The employment security agencies have traditionally been required, through legislation and public policy, to administer special services to groups of workers who often find barriers to meaningful, well-paid jobs, i.e., older workers, handicapped, females, youth, disadvantaged, and veterans.

Older workers

The aging of the population will necessitate increased services and programs for those aged 45 years and over.

The possibility of extending forced retirement to 75 or 80 years of age will require changed attitudes from employers, program planners, and public employment agencies, so that the skills and experience of these older workers will be the primary determinants in providing services to them.

The older worker will be a more powerful lobbying force in the future than ever before. Projections concerning this group point out that, by the year 2000, workers 45 years old and over will comprise 40% of the total labor force, compared to the 1980 figure of 30%.

During the past decade, applicants 45 years old and over who sought services through the employment service increased by 22%.

In FY 1980, approximately ten percent of all registered applicants were older workers.

Eight percent of those placed were older workers. Eleven percent of those counseled and 3.5% of those enrolled in training were older workers.

Nineteen percent of all veterans, 27% of all handicapped, and 14% of all state claimants were 45 years old and over.

The majority of these applicants represented white collar workers, andmost were placed in jobs with wages of $3.00 to $3.99 per hour.

Considering the steady increase of older workers in the labor force, it would seem that the Job Service Centers are not registering a significant portion of those requiring employment-related services. This disparity may be due to: 1) a lack of emphasis in older-worker programs or 2) contacts in industry that this group has established by virtue of their being in the working world for a long time.

Handicapped

National projections for the handicapped population seeking services in USES local offices are estimated to increase from five to ten percent throughout the 1980's.

The primary reason for this projected increase is the amended Rehabilitation Act of 1973, Section 304, which mandates changes in current services as well as the implementation of new services. Other reasons contributing to the projected increase are: 1) the national trend of the handicapped population to actively seek services; 2) the handicapped population is now becoming a more cohesive lobbying body; 3) the handicapped population seeking work experience now has recourse under Sections 503 and 504 of the Act if members are discriminated against; and 4) a national campaign on the part of the President's Committee for Employment of the Handicapped and on the part of other agencies to refer handicapped to jobs that are commensurate with their qualifications, skills, and abilities.

Approximately four percent of all CDET applicants are handicapped. Job Service Centers have always provided special services to this group of applicants, and, during FY 1980, equity of service was met in most of the following activities:

Service	Ratio, Handicapped/Total
Applicants available	3.8
Counseled	11.1
Placed after counseling	9.7
Tested	4.4
Enrolled in training	3.8
Job Development contacts	7.9
Placed as a result of Job Development	6.5
Total individuals placed	3.2
Placed at $4.00 an hour and over	3.6

Improvements in the placement rate and wages paid to handicapped workers should be a major goal of local Job Service Centers.

Women

Some basic facts concerning women in the labor force are:

- the aging of the population is even more apparent among females, because they tend to outlive males by approximately seven years.

- nationally, nearly 12 million more women were in the labor force in 1979 than in 1970.

- sixty percent of women aged 25 through 34 years were working or looking for work in 1979.

- fifty-five percent of employed women were working in traditional clerical and service occupations;

52% of all female professional-technical workers were in the areas of nursing and pre-college teaching in 1979.

- unemployment rates are generally higher for women than for men.

- women working full-time still average about six dollars for every ten earned by men.

Women in Colorado follow closely the national experience. Females in the Colorado labor force in 1980 comprised 46%, juxtaposed with the 42.5% proportion in 1970.

Females comprised 85% of all CDET applicants with clerical skills, and 59% of those with skills in the service occupations. Efforts to steer female applicants toward training in nontraditional occupations would result in placing them in jobs paying higher wages. Most of the traditional occupations in which females work and in which they are being placed are low-paying and do not offer upward mobility.

Women comprised 42% of all registered applicants in FY 1980. Services in three important areas were below parity: Job Development contacts, placements, and placements in jobs paying $4.00 an hour or more.

Service	Ratio, Women/Total
All applicants	42.0
Counseled	47.7
Placed after counseling	41.9
Tested	56.9
Enrolled in training	48.9
Job Development contacts	27.0
Placed as a result of Job Development	41.7
Total placed	33.7
Placed at $4.00 an hour and over	9.3

Job Service managers should implement programs to counsel and train women and to educate employers to the fact that women belong in all occupational categories, and that they should be remunerated on the basis of equal pay for equal work.

Youth

Teenaged youth (16 through 19 years old) are estimated to represent about 7.6% of the population in 1982. The dramatic lifestyle changes in the 1960's, when these teenagers were being born, will be reflected in their decreased proportion to total population during the next few years.

It is estimated that teenagers comprised approximately ten percent of the Colorado labor force in 1980. The estimated unemployment rate for 16-through-19-year-olds was 12.4%, compared to a 3.5% rate for the total labor force.

Two major causes of teenage unemployment are low job attachment and the slow absorption of new entrants into the labor market. Availability of entry-level jobs at minimum wage is usually good, and usually meets the needs of those youths who seek temporary employment.

Many of the federal programs geared to youth employment attempt to meet the immediate and future needs of teenagers.

In Colorado, a program is being launched through the Governor's Office in cooperation with the employment service and private industry to employ youth during the summer of 1981.

Approximately 15% of all applicants registered in FY 1980 were 16 through 19 years old, and about 11.5% were 20 through 21 years old. Nineteen percent and thirteen percent of those placed were 16 through 19 and 20 through 21 years old respectively. Sixty percent of those enrolled in training were youth under 22, Of those counseled, the ratios were 13% for the 16-through-19-year-olds and about nine percent for the 20-through-21-year-olds.

Occupational skills of teenagers were centered in the clerical, services, structural, and miscellaneous occupations.

Placements of youths were in the same categories. Wage rates of applicants placed were concentrated in the $3.00-$3.99-per-hour range. Increased proportions of placements at $5.00 per hour or more indicate increased success in placing youth in jobs above minimum scales.

This overview indicates that the Colorado Job Service is successfully attempting to meet the employment-related needs of youth.

Economically disadvantaged

Approximately nine percent of the Colorado population will be in poverty in FY 1982, and about 40% of those economically disadvantaged will be minorities (Hispanic, black, Indian, Asian, and Pacific Islander). The Colorado Job Service applicant file in FY 1980 posted 25% of the total as economically disadvantaged, of which 43% were minorities. The applicant racial/ethnic proportion is similar to the total population's, but the employment service obviously draws a greater proportion of disadvantaged applicants as compared to their proportion in the total population.

Average hourly wages in FY 1980 for openings filled for total applicants as compared to disadvantaged applicants were:

	All Applicants	Economically Disadvantaged
All occupations	$ 4.15	$ 3.78
Professional, technical, managerial	4.84	4.33
Clerical	3.79	3.53
Sales	3.58	3.39
Farming, fishery, forestry	3.36	3.42
Processing	3.86	3.88
Machine	4.26	4.19
Benchwork	3.68	3.60
Structural	4.39	4.18
Miscellaneous	4.00	3.97

In all occupational categories, the disadvantaged received lower hourly wages in all categories except farming and processing.

In evaluating equity of service to the disadvantaged registrants, the following statistics indicate that Job Service Centers served this applicant group well:

Service	Disadvantaged as Percent of Total Served
Total disadvantaged	25.0
Counseled	49.0
Placed after counseling	49.0
Tested	16.5
Enrolled in training	69.0
Job Development contacts	29.0
Placed as a result of Job Development	34.0
Placed	25.0
Placed at $4.00 an hour and over	20.0

The single most important area of service requiring *improvements is to find better-paying jobs for all applicants, as well as for the disadvantaged.*

Efforts to train disadvantaged applicants in occupations that offer upward mobility would be one significant measure to improve the economic status of this population group.

Recommendations for improved services for handicapped, older worker, youth, and female applicants would include the following:

1. *Increased job development*
2. *Increased outreach*
3. *Increased employer relations*
4. *Increased counseling services*
5. *Increased file search*

An active, concentrated effort should be made by the local office managers to equitably provide services to all applicants entering local offices, with stronger emphasis on the unique employability problems of these worker groups.

ECONOMIC OVERVIEW OF THE DENVER-BOULDER LMA

The Denver-Boulder LMA is comprised of eight counties: Adams, Arapahoe, Boulder, Denver, Jefferson, Clear Creek, Douglas, and Gilpin. These eight counties also represent Colorado Planning Region 3 and Vocational Education Planning Region 3. The first five counties mentioned above are also CETA Prime Sponsor areas.

Population

- *the population estimate of 1,705,914 for 1982 represents 56% of the total state population.*
- *19% of the population is estimated to be minorities, juxtaposed with the state rate of 11%.*
- *the female population of 51% of total matches that of the state.*
- *the overall increase in population from 1970 to 1980 was 30%, the same rate as in the entire state. However, Douglas County experienced the greatest growth, approximately 200%, Arapahoe ranked second at 81%, and Denver trailed all counties, posting a five percent decrease.*

Labor force

- *the FY 1982 labor force estimate of over 900,000 persons represents approximately 60% of the total state labor force.*
- *because this area represents more than half the population and labor force, its industry and population representation significantly influences the state ratios.*
- *the labor force growth between 1970 and 1980 was 60%, or double that of the population increase.*
- *Denver-Boulder LMA nonagricultural employment represents approximately 64% of the state's total nonagricultural employment.*
- *the largest industry sectors in this area are*

trade, services, government, and manufacturing. Employment growth between 1980 and 1985 is projected at approximately five percent per annum for both the Denver-Boulder LMA and the state.

Nonagricultural wage and salary employment grew by approximately 2.5%, posting increased employment at a decreasing rate. Employment growth in 1981 is expected to reflect fluctuations as this area's economy responds to the national legislative and presidential political and economic moves and counter-moves. The 1980-1985 projections for this region forecast very conservative growth.

Employment service activities

- during FY 1980, 103,000 applicants were available for employment-related services in the Denver-Boulder LMA.
- special applicant groups as a percent of total applicants were:

All applicants	100%
Youth (under 22)	24%
Older worker (45 and over)	10%
Female	39%
Veteran	20%
Disadvantaged	23%
Handicapped	4%
State claimants	30%
Minorities	31%

- services to applicants posted the following percentages (as percents of total applicants):

	Placed	Counseled	Average Wages
All applicants	100.0%	100.0%	$ 3.98
Youth (under 22)	29.0%	18.0%	NA
Older worker (45 and over)	8.5%	12.5%	NA

	Placed	*Counseled*	*Average Wages*
Female	*33.0%*	*50.0%*	*3.78*
Veteran	*25.0%*	*24.5%*	*4.38*
Disadvantaged	*27.0%*	*55.0%*	*3.93*
Handicapped	*4.3%*	*11.4%*	*4.25*
State claimant	*16.5%*	*23.0%*	*NA*
Minorities	*33.0%*	*40.0%*	*NA*

- *occupational skills of Denver-Boulder LMA applicants were:*

White collar	*40.4%*
Services	*14.1%*
Farming	*1.8%*
Blue collar	*43.6%*

- *of those job openings received and filled, the occupational categories were:*

	Received	*Filled*
White collar	*29.8%*	*19.7%*
Services	*17.1%*	*14.5%*
Farming	*5.7%*	*6.8%*
Blue collar	*47.4%*	*59.0%*

The employment service activities during the period October 1979-September 1980 (FY 1980) in the Denver-Boulder metropolitan area posted a 12% increase in registered applicants, a decrease of 6.5% in placements, a 21% decrease in the number of job openings received, and a drop of 21% in registered claimants. All of these events further substantiate the signs of an economic downturn.

ECONOMIC OVERVIEW
OF
ADAMS COUNTY

Population

- *population projected for 1982 is 257,679. During 1970-1980, this county's population increased at the same rate as the entire state's. Of the five major counties in the metropolitan area, it ranks fourth in population size. The major minority group, Hispanics, represents 15% of the total population, and females are approximately 50% of total.*

Labor force

- *the FY 1982 labor force is anticipated to be 189,033, with an expected participation rate of 76.7%. The unemployment estimate, 3.4%, is only slightly higher than the state estimate.*

Industry employment

- *employment is concentrated in three major industry sectors: trade, manufacturing, and government, with services ranking fourth. Private non-agricultural wage and salary employment from 1980 through 1985 is estimated to increase by approximately, 56%, with trade, manufacturing, and services maintaining their lead in total employed. However, the industry sector expected to increase most proportionately is transportation and public utilities.*

Employment service activities

- *numbers of and services to applicants who registered at local Job Service Centers in this county in FY 1980 were:*

	All Applicants	Placed	Counseled
Total	100.0%	100.0%	100.0%
Female	40.8%	35.0%	45.5%
Youth (under 22)	27.3%	33.0%	20.5%
Older worker (45 and over)	10.5%	7.6%	11.8%
Veteran	20.0%	31.3%	31.5%
Disadvantaged	20.6%	34.7%	52.2%
Handicapped	3.8%	5.0%	13.7%
State claimant	36.2%	28.1%	22.9%
Minority	25.9%	31.3%	26.9%
Migrant	1.6%	9.0%	0.2%

Operations in this Job Service Center area indicate parity of services for most special applicant groups. The consistent area of below-grade service is to the female, particularly in the areas of placement and wage rates. The older worker and the state claimant also suffer lack of equity in placement activity. Migrants and veterans were placed in proportions far exceeding their total applicant proportions. This type of success should be broadened to include the other special groups requiring such services.

- *occupational skills represented among applicants and job openings received and filled were:*

	All Applicants	Job Openings Received	Job Openings Filled
White collar	34.0%	24.3%	16.8%
Services	12.6%	15.6%	12.5%
Farming	2.1%	6.7%	9.1%
Blue collar	51.3%	53.4%	61.5%

It appears that the occupational category of white collar workers reflect the largest discrepancy, in that 34% of applicants are coded with these skills but only 24% of all job openings request these skills, sig-

nifying that we have more applicants than jobs; yet only 17% of these openings are filled.

Question: are applicants incorrectly coded, is the agency doing a poor job of coding, or are the jobs of such poor quality that they are difficult to fill? These questions should be addressed and programs implemented to modify such situations so that both applicant and employer could receive improved services.

Additionally, training programs should be geared to meet demand, if it is satisfactorily determined that the existing supply is lacking.

- *wage rates of applicants placed reflected the following:*

All applicants	*$ 4.01*
Male	*4.43*
Female	*3.59*
Disadvantaged	*4.06*
Handicapped	*4.30*
Veteran	*4.63*
Minority	*3.95*

Wage rates in this area exceeded the average for all groups except females.

ECONOMIC OVERVIEW
OF
ARAPAHOE COUNTY

Population

- *between 1970 and 1980, this county increased its population by 81%. It ranks third in size when compared to the other four major metropolitan counties, but it had the greatest growth during this period. Estimated 1982 population is 308,788, of which 52% is female, and total minority population is only eight percent, the leading group being Hispanics.*

Labor force

- *the FY 1980 civilian labor force is expected to be approximately 155,965, and the participation rate to be 68.9%.*

Industry employment

- *trade and services are the leading industry employers in this county, with government and manufacturing ranking third and fourth.*

- *the outlook for private nonagricultural wage and salary employment to 1985 reflects a growth of approximately six percent per annum. The leading sectors are expected to be mining, retail trade, and finance, insurance, and real estate.*

Employment service activities

- *services to applicants in this county were:*

	All Applicants	Placed	Counseled
Total	100.0%	100.0%	100.0%
Female	40.1%	34.1%	44.9%
Youth (under 22)	24.1%	30.6%	14.0%
Older worker (45 and over)	11.9%	8.6%	16.3%
Minority	13.8%	15.6%	18.3%
Veteran	23.3%	38.1%	36.9%
Disadvantaged	10.7%	19.4%	42.2%
Handicapped	4.0%	7.6%	16.6%
State claimants	28.8%	19.7%	25.7%

- parity of service dominates in this Job Service Center area except for some weakness in placement activity for women, older workers, and claimants, and in counseling for youth.

- the occupational distribution of applicant skills, job openings received, and job openings filled during 1980 posted the following:

	All Applicants	Job Openings Received	Job Openings Filled
White collar	46.5%	35.3%	22.1%
Services	10.7%	16.5%	10.4%
Farming	1.7%	7.3%	7.0%
Blue collar	41.0%	41.0%	60.5%

Occupational skills and job openings received indicate parity and better for blue collar workers, but reflect a need to develop more job openings for white collar skills, inasmuch as the applicants registering seem to represent these skills in greater proportions than those in which their fields are represented among openings received.

- wage placement rates indicate the following:

All applicants	*$ 4.06*
Females	*3.77*
Males	*4.35*
Disadvantaged	*4.16*
Handicapped	*4.25*
Veteran	*4.49*
Minority	*4.10*

Females are consistently being placed at wage rates below those of males and usually below the average for the area. Even in the skills into which females are traditionally placed, i.e., clerical, services, and (some) professional-technical, the female's wages are less than the male's. Each local area's goals, as well as the state's, should be geared toward upgrading the quality and quantity of services to females.

ECONOMIC OVERVIEW OF BOULDER COUNTY

Population

- *population growth of 43% between 1970 and 1980 still kept Boulder County in fifth position among the five major counties in the metropolitan area. The 1982 estimate of total population is 198,384, of which 50% will be female and 8.5% will be minorities. Hispanics are the most representative of minorities in this county.*

Labor force

- *labor force and participation rate estimates for FY 1982 are 107,548 and 70.6% respectively. The estimated unemployment rate of 3.3% is similar to the state estimate, implying a moderate economy during the next eighteen months.*

Industry employment

- *in 1980, manufacturing and government were the leading employers, with trade and services following closely. The projections for 1980-1985 shows expectations of approximately seven-percent-per-annum growth in private nonagricultural wage and salary employment, with wholesale trade and services leading the other industry sectors. This growth will be slightly higher than the approximate five percent expected in the state for the same period.*

Employment service activities

- *services to applicants in FY 1980 posted the following:*

	All Applicants	Placed	Counseled
Total	100.0%	100.0%	100.0%
Youth (under 22)	22.8%	27.4%	13.9%
Older worker (45 and over)	7.2%	5.5%	11.6%
Female	39.3%	26.8%	44.0%
Minority	11.1%	11.8%	14.4%
Veteran	16.7%	25.9%	19.4%
Disadvantaged	22.8%	29.0%	44.9%
Handicapped	3.7%	3.9%	14.7%
State claimant	28.4%	18.2%	28.2%

Consistently, females are not receiving parity from service providers; veterans receive services in proportions that are much higher than their representation in the applicant population. Improvement of services, both qualitatively and quantitatively, should be a goal in respect to females, claimants, and older-worker applicants.

- *occupations of applicants and job openings received and filled were:*

	All Applicants	Job Openings Received	Job Openings Filled
White collar	42.5%	13.3%	9.5%
Services	11.9%	15.0%	14.1%
Farming	3.1%	3.4%	3.2%
Blue collar	42.4%	68.3%	75.2%

'he greatest disparity is again consistent with other areas in the agency. Applicants registered with white collar occupational skills far exceed the job openings received and filled for those skills, whereas the proportions of blue collar openings received and filled seem to be considerably greater than the proportion of these skills among registered applicants. Emphasis on job development to match skills to openings,

by recruitment of employers, training programs, or better coding and file search, should be included in Job Service Center plans and goals in FY 1982.

ECONOMIC OVERVIEW
OF
DENVER COUNTY

Population

- *Denver County is the most populated county in Colorado, despite the fact that it is the only major metropolitan county that lost population between 1970 and 1980. This population decrease is indicative of the trend of both workers and industry establishments to locate outside of the core city. During this decade, suburbia and exurbia experienced growth far exceeding the state average of 30%. The growth and expansion of industrial and technological complexes such as Montbello, the Denver Technological Center, and Inverness and Greenwood Plazas have succeeded in luring many employers outside of the downtown Denver area.*

- *the 1982 estimated population of 514,509 in Denver City and County includes the largest proportions of minorities in the state: 23.3% Hispanic, 14.7% black, and 2.2% other races. Twenty-three percent of the population are those under 16 years of age, juxtaposed with 27% in 1970. Females represent 53% of total population.*

Labor force

- *the labor force in FY 1982 is estimated at 290,400, posting a participation rate of 73.3%, one of the highest in the state.*

Industry employment

- *approximately 25% of total nonagricultural wage and salary employment in this county is concentrated in the services industry sector. The second-largest employer (approximately 23%) is* trade; manufacturing ranks third at about 13%. Mining employs the smallest number of persons, but it was the industry posting the largest gains over last year. The location and relocation of energy-related firms' home offices in downtown Denver in anticipation of Colorado's energy boom has been the major influence in this growth.

- projections of private nonagricultural wage and salary employment for 1980 through 1985 indicate less than 10,000 job openings due to growth per year, a considerable moderation from the previous five years.

Employment service activities

	All Applicants	Placed	Counseled
Total	100.0%	100.0%	100.0%
Youth (under 22)	21.6%	25.6%	17.3%
Older worker (45 and over)	10.4%	9.6%	12.3%
Minority	48.5%	48.2%	54.2%
Female	37.7%	30.9%	51.6%
Veteran	19.5%	25.5%	20.5%
Disadvantaged	32.5%	35.9%	60.4%
Handicapped	4.0%	4.2%	9.4%
State claimants	28.4%	16.0%	22.3%

The Denver area Job Service Center follows closely the pattern observed in other metropolitan Prime Sponsor areas. Equity of service in placement and counseling activity is achieved for all groups except females and claimants. Proportionately, females are counseled in considerable excess of their ratio to total applicants, but it is obvious that jobs with upward mobility and wage rates above the bare minimum are not resulting from the counseling services.

- occupational representation for applicants and job openings received and filled is:

	All Applicants	Job Openings Received	Job Openings Filled
White collar	38.5%	38.4%	22.2%
Services	17.8%	18.4%	16.5%
Farming	1.6%	5.4%	8.0%
Blue collar	42.1%	42.8%	53.3%

The Denver area is registering more applicants with the skills required by employers than are most of the other Colorado metropolitan areas' Job Service Centers. Matching applicant skills with openings received is fairly successful, except for the white collar occupations. A thorough and continuous system of file search and/or improved occupational code assignments could result in filling more of these job openings. The overall fill rate in Denver is 59%, and efforts to increase this percentage to the 65-70% range (as posted by the state) would result in better services to both applicants and employers.

- *average hourly wage rates of filled openings for targeted applicants were:*

All applicants	$ 4.09
Male	4.28
Female	3.89
Disadvantaged	3.94
Handicapped	4.29
Veteran	4.43

As is the case for other metropolitan areas in Colorado reviewed (as well as for the state), the female applicant is not receiving equitable services relative to placements and wage rates.

ECONOMIC OVERVIEW
OF
JEFFERSON COUNTY

Population

- this county ranked first of all 63 counties in total population increase - 135,004 persons - between 1970 and 1980. It is the second most-populated county in Colorado, and the estimated 1982 population is 389,880. 50% of the population will be female; five percent will be comprised of minorities, Hispanics being the largest group. Approximately 75% of the total population is 16 years old and over.

Labor force

- projected labor force for FY 1982 is 212,835, the participation rate is 73.5%, and the unemployment rate is 2.5%, indicating a healthy economy for this county in FY 1982.

Industry employment

- the leading industry employers are government, trade, and manufacturing, with services closely following. The employment growth for private nonagricultural wage and salary employment from 1980 through 1985 is estimated to increase at approximately six percent per annum. The leading growth industries are expected to be mining and transportation and public utilities.

Employment service acitivities

- during FY 1980, the Jefferson County Job Service Center registered approximately 20,370 applicants.

- the ratios of applicants and services were:

	All Applicants	Placed	Counseled
Total	*100.0%*	*100.0%*	*100.0%*
Youth (under 22)	*28.2%*	*35.6%*	*21.4%*
Older worker (45 and over)	*9.7%*	*6.6%*	*8.9%*
Minority	*7.6%*	*8.2%*	*10.9%*
Female	*40.8%*	*37.1%*	*51.4%*
Veteran	*19.1%*	*21.0%*	*20.2%*
Disadvantaged	*11.6%*	*13.7%*	*48.1%*
Handicapped	*4.6%*	*4.3%*	*12.2%*
State claimant	*30.0%*	*14.5%*	*20.7%*

The Job Service Center in Jefferson County is meeting parity of service for many applicant groups, but it also needs to upgrade the quality and quantity of services to claimants, females, and older workers.

- *occupational skills of applicants and job openings received and filled in FY 1980 reflected the following:*

	All Applicants	Job Openings Received	Job Openings Filled
White collar	*46.2%*	*38.4%*	*35.0%*
Services	*9.0%*	*17.5%*	*12.1%*
Farming	*2.0%*	*7.3%*	*7.3%*
Blue collar	*42.7%*	*36.9%*	*45.6%*

The ratio of openings filled to openings received was only 50%. Efforts to improve this rate are probably dependent on quality of jobs, as well as on the skill level of applicants. As recommended for other Job Service Centers, concentrated efforts for ongoing file search, job development, and improved occupational coding could result in improved services to both applicants and employers.

- *wage rates at which applicants were placed in* this area were;

All applicants	$ 4.05
Male	4.37
Female	3.73
Disadvantaged	4.10
Handicapped	4.30
Veteran	4.61

Consistently, the female is being placed in jobs with wages well below the average for the area; veterans are being placed in jobs paying the highest wages, with males closely following. It is again emphasized that local office managers, as well as the state administrators, should emphasize improving services to females and claimants in FY 1982.

ECONOMIC OVERVIEW
OF THE
COLORADO SPRINGS SMSA

- Population: estimated 1982 population is about 333,636.
  - 45-years-old-and-over age group will post the greatest growth.
  - 16% of the population is comprised of minorities, and females make up 56% of total population.

- Labor force
  - unemployment in this area in FY 1982 will approximate 3.8%, somewhat higher than the 3.3% for the state.
  - the proportions of males and females in the labor force are relatively the same as in previous years, despite the fact that the population proportions are 56% female and 44% male.
  - the participation rate for those 16 years old and over is expected to be about 58.2%. This is considerably lower than the state's participation rate.

- Industry employment
  - the three largest industry employment sectors in this area are trade, services, and government, with manufacturing running fourth.

- Employment service activities
  - in FY 1980, approximately 28,000 applicants were available for employment-related services.
  - representation of target groups posted the following:

Female	43%
Veteran	29%
Economically disadvantaged	28%
Handicapped	5%
State claimant	27%
Interstate claimant	7%

- approximately 20% of all applicants were placed.
- equity of service relative to applicant proportions was met for all special applicant groups except state claimants. This phenomenon could be justified if a portion of claimants were job-attached; otherwise, it would be incumbent upon management to determine why claimants were not being placed in proportion to their representation.
- occupational skills of applicants showed the following:

White collar	38%
Blue collar	44%
Services	16%
Farm	2%

- job openings received and filled by occupational categories posted the following proportions:

	Received	Filled
White collar	20%	17%
Blue collar	56%	61%
Services	20%	17%
Farm	4%	5%
	100%	100%

The occupational skills do not match the skills demanded by employers. It would seem feasible for employment service representatives to develop jobs for applicants in accordance with their skills, inasmuch as only 20% of the applicants were placed.

- average wages for males were $3.89 per hour, for females $3.49 per hour, for veterans $4.00 per hour, for disadvantaged $3.64 per hour, and for handicapped at $3.83 per hour. Females are typically being paid the lowest wages, and service providers at local offices should concentrate on upgrading the quality of jobs provided for females.

ECONOMIC OVERVIEW
OF THE
PUEBLO SMSA

This county has not been a high-growth area, despite the fact that it is located along the highly industrialized Front Range.

Population

- *growth from 1970 to 1980 was low, ranking thirty-ninth in the state and posting a six percent gain. The estimated 1982 population is 132,360. 51% of the population will be female, and approximately 38% minorities.*

Labor force

- *FY 1982 labor force of 55,764 will post an unemployment rate of 5.4% and a participation rate of 55.4%. Female representation in the labor force, at 43%, is somewhat lower than in other metropolitan areas.*

Industry employment

- *private sector nonagricultural wage and salary employment is estimated to decrease from 1980 to 1982. The three leading industry sectors (services, manufacturing, and retail trade) employed about 80% of total private sector nonagricultural employment. (The leading employer in Pueblo County is the CF&I Steel Corporation.) Projections to 1985 indicate the same decreasing pattern, an approximate decrease of 0.5% per annum.*

Employment service activities

- *approximately 15,793 applicants registered for employment-related services in FY 1980.*

- special applicant groups as a percent of total applicants, and the services they received, were:

	Applicants Registered	Placed	Counseled	Average Wages
Total	15793	3164	1342	$ 3.61
Youth (under 22)	33.9%	38.7%	28.9%	NA
Older worker (45 and over)	9.8%	7.4%	11.9%	NA
Female	45.3%	38.9%	61.8%	3.38
Veteran	16.7%	18.9%	17.7%	4.01
Disadvantaged	29.4%	36.2%	38.0%	3.57
Handicapped	4.1%	3.4%	10.7%	NA
State claimant	22.6%	18.1%	20.0%	3.83
Minority	44.7%	51.4%	39.3%	NA

The Job Service Center in this area reflects the same results in services to applicants as the rest of the state. Females are not receiving equitable services relative to their numbers in the applicant file. This is true of the older worker and the claimant as well.

- occupational skills of applicants and occupational demand for job openings received and filled in this area in FY 1980 were:

	All Applicants	Job Openings Received	Job Openings Filled
White collar	40.8%	25.0%	20.9%
Services	20.7%	18.6%	17.2%
Farming	1.9%	11.2%	13.1%
Blue collar	36.6%	45.2%	48.8%

Only 20% of all applicants were placed, despite an 82% fill rate of openings filled to openings received. This would indicate that the Job Service Center must do more job development to penetrate those employers not using the Job Service to list their openings, and to develop jobs that will match applicant skills.

ECONOMIC OVERVIEW
OF THE
FORT COLLINS SMSA

Population

- estimated 1982 population is about 157,079.
- the 25-through-34-years-old age group will post the greatest growth.
- seven percent of the population will be comprised of minorities, and females will make up fifty-one percent of total population.

Labor force

- unemployment in this area in FY 1982 will approximate 3.1%, slightly lower than the 3.3% for the state.
- the participation rate for those 16 years old and over is expected to be about 69.4%, which is somewhat lower than the state's participation rate.

Industry employment

- the three largest industry employment sectors in this area are government, manufacturing, and trade. Projected growth to 1985 will approximate seven percent per year, with manufacturing and wholesale trade leading.

Employment service activities

- in FY 1980, approximately 14,761 applicants were available for employment-related services.
- representation of target groups posted the following:

Female	43.0%
Veteran	16.5%
Economically disadvantaged	21.1%
Handicapped	3.5%
State claimant	25.9%
Interstate claimant	1.2%

- approximately 27% of all applicants were placed.

- equity of services relative to applicant proportions was met for all applicant groups, with the exceptions of the handicapped and state claimants placed in employment. It would seem incumbent upon management to determine why the handicapped and claimants were not being placed in proportion to their representation.

- occupational skills of applicants and of job openings received and filled posted the following proportions:

	All Applicants	Job Openings Received	Job Openings Filled
White collar	40.1%	20%	18%
Services	12.8%	17%	14%
Farming	4.6%	8%	10%
Blue collar	42.6%	55%	58%

The occupational skills of applicants do not match the skills demanded by employers. It would seem reasonable for Job Service office staff to develop jobs for applicants in accordance with their skills, inasmuch as only 27% of the applicants were placed.

- average wages for males were $4.04 per hour, for females $3.51 per hour, for veterans $4.23 per hour, for disadvantaged $3.81 per hour, and for handicapped $3.97 per hour.

Females are typically being paid the lowest wages, and service providers at local offices should concentrate on upgrading the quality of jobs provided for females.

ECONOMIC OVERVIEW
OF THE
GREELEY SMSA

Population

- estimated 1982 population is about 129,380.
- the 25-through-34-years-old age group will post the greatest growth.
- 21% of the population is comprised of minorities, and females make up 51% of total population.

Labor force

- unemployment in this area in FY 1982 will approximate 3.9%, somewhat higher than the 3.3% for the state.
- the proportions of males and females in the labor force are 56 and 44 percent respectively, despite the fact that the population proportions are 51% female and 49% male.
- the participation rate for those 16 years old and over is expected to be about 67.2%.

Industry employment

- the four largest industry employment sectors in this area are services, government, trade, and manufacturing. Growth during the period 1980-1985 will average approximately two percent per year, significantly less than the five percent expected for the state.

Employment service activities

- in FY 1980, approximately 11,317 applicants were available for employment-related services.

- representation of target groups posted the following:

Female	41%
Veteran	16%
Disadvantaged	38%
Handicapped	5%
State claimant	20%
Migrant	6%

- approximately 23% of all applicants were placed.

- equity of service relative to applicant proportions was met for some applicant groups; however, equity in placement for claimants and women was not met. It would be incumbent upon management to determine why these special applicant groups were not being placed in proportion to their representation, and to implement policies to rectify these inequities.

- occupational skills of applicants and of job openings received and filled showed the following;

	All Applicants	Job Openings Received	Job Openings Filled
White collar	33%	23%	19%
Services	15%	15%	14%
Farming	5%	19%	21%
Blue collar	47%	43%	46%

The occupational skills of applicants do not match the skills demanded by employers. It would seem desirable for Job Service Center staff to develop jobs for applicants in accordance with their skills, inasmuch as only 23% of the applicants were placed.

- average wages for males were $3.66 per hour, for females $3.32 per hour, for veterans $3.95 per hour, for disadvantaged $3.40 per hour, and for handicapped, $3.62 per hour.

ECONOMIC OVERVIEW
OF
CETA BALANCE OF STATE

The CETA Balance of State area is comprised of 54 counties that are represented primarily in eleven of the thirteen planning regions.

It is difficult to evaluate the economic outlook for this area, inasmuch as the composition of the population, labor force, and industry and occupational employment vary from region to region.

The statistical data presented in this report is made available primarily to satisfy the needs of the CETA Balance of State Prime Sponsor.

Population

- estimated 1982 population is about 616,076.
- the 25-through-34-years-old age group will post the greatest growth.
- 16% of the population is comprised of minorities, of which 14% are Hispanic, and females make up 49.7% of total population.

Labor force

- unemployment in this area in FY 1982 will approximate 3.5%, which is slightly higher than the 3.3% for the state.
- the participation rate for those 16 years old and over is expected to be about 65.7%, somewhat lower than the state's participation rate.

Industry employment

- in 1980, private nonagricultural wage and salary employment was 161,730; trade ranked first and services second in numbers employed. Employment growth will approximate 6.3% from 1980 to 1985, with mining posting a 12% growth rate per year. This high growth rate is the result of the expected boom in energy, primarily in Region 11.

Employment service acitivities

- in FY 1980, approximately 62,941 applicants were available for employment-related services.

- representation of target groups posted the following:

Female	41.0%
Veteran	16.6%
Disadvantaged	24.0%
Handicapped	2.6%
State claimant	15.0%
Migrant	1.1%

- approximately 29% of all applicants were placed. Equity of service relative to applicant proportions was met for all special applicant groups except for females and state claimants. This phenomenon could be justified if a portion of claimants were job-attached; otherwise, it would be incumbent upon management to determine why claimants were not being placed in proportion to their representation. Also, a special effort should be made to equitably place female applicants, as they are consistently receiving less service than other special classes of applicants.

- occupational skills of applicants and of job openings received and filled posted the following proportions:

	All Applicants	Job Openings Received	Job Openings Filled
White collar	34.0%	18.6%	15.4%
Services	17.8%	21.3%	19.4%
Farming	4.0%	10.6%	10.6%
Blue collar	44.2%	49.5%	54.6%

The underrepresentation of white collar job openings received relative to the number of applicants coded in these occupational skills is occurring in almost all Job Service Centers in the state. Managers and local office staff should implement goals and plans to develop jobs that will fit the occupational skills of applicants.

TECHNICAL NOTES

POPULATION PROJECTIONS

In cooperation with the Labor Market Information Division of the Employment and Training Administration (LMI-ETA) of the U.S. Department of Labor, the Labor Market Projection Model (LMPM) was started at the Lawrence Berkeley Laboratory (LBL) in the summer of 1975 to provide local CETA planners and SESA analysts with "current" local estimates of population, labor force, and persons in need of manpower services by race, sex, and age.

According to the LMPM, the basic method of calculating the population is by using a demographic cohort aging model that relies on 1970 Census data. This involves projecting the populations of five-year age cohorts by estimating births, deaths, and migration. The cohorts are also specific by race and sex. The projections to 1982 are done in two steps: first by projecting to 1975, and then again to 1980. The 1980 race/sex distribution is then controlled to the 1982 population projection supplied by the SESA analyst to LBL to produce the final figures.

The labor force projections are also based on the 1970 population and labor force of the particular area. These data are used to compute 1970 participation rates by race, sex and age from which 1982 participation rates are estimated, using the annual national changes in the rates for the cohorts since 1970. The estimated 1982 participation rates are applied to the 1982 projections of civilian population to yield the civilian labor force. These 1982 projected labor force figures are then forced to add to a control total provided by the local SESA analyst.

YOUTH LABOR FORCE DATA

The annual average 1980 labor force for 16-through-19-year-old and 20-through-21-year-old youth is estimated by utilizing the LBL projected ratios of 1980 controlled to the 1982 projection and applying these ratios to the 1980 annual average total labor force for each area and county published by the Labor Market Information Branch.

EMPLOYED PART-TIME FOR ECONOMIC REASONS

An analysis of those employed part-time for economic reasons nationally indicates that the proportion increases during times of slow economic growth and recessionary years and decreases during expansionary periods. Inasmuch as Fiscal Year 1982 is estimated to be a year of slow growth after a shaky, soft period in 1981, it was estimated by the Colorado analyst that approximately 4.9% of total employed persons would be employed part-time for economic reasons. Racial/ethnic ratios were based on the racial/ethnic ratios of the employed-part-time Job Service applicants.

LONG-TERM UNEMPLOYED

An average ratio of the long-term unemployed to total unemployment for 1969-1979 for the United States was applied to the estimated total unemployment in Colorado. Racial/ethnic ratios were determined by using the racial/ethnic ratios of the unemployed Job Service applicants.

ESTIMATED UNEMPLOYED VETERANS NEEDING MANPOWER SERVICES

The numbers of unemployed total and Vietnam-Era veterans needing manpower services reflects the numbers of veterans using the Job Service during a twelve-month period. These numbers do not reflect the average number of veterans who are unemployed in the labor force.

DISPLACED FEMALE HOMEMAKERS

This estimate is based on the following assumptions:

1. *In 1975, the Survey of Income and Education estimated that 3.7% of females aged 16 years and over were displaced homemakers in Colorado and its metropolitan areas.*
2. *Since 1975, females have continued to enter and remain in the labor force in greater numbers than in the previous decade.*
3. *Females are outliving males by approximately seven years, thereby forcing a larger number of older nonworking females into the labor market.*
4. *The cutting of social welfare programs during the next eighteen months due to the current political and economic environment will force additional women into the labor force.*

Therefore, the number of displaced female homemakers in Colorado and the metropolitan areas is estimated at 4.3% for white nonhispanics, at 4.4% for the total, and 4.7% for minorities.

PERSONS BELOW THE POVERTY LINE

These estimates were made from the LBL updating model, which includes the following steps:

1. *Tabulate 1970 Census and 1979 Current Population Statistics (CPS) data for the region:*

	1970 Census (State)	1970 CPS (Region)	1979 CPS (Region)
Above poverty	78985	955178	941451
Below poverty	29863	198909	91746
Total	108848	1154087	1033197

2. *Convert to percents:*

	1970 Census (State)	1970 CPS (Region)	1979 CPS (Region)
Above poverty	72.56	82.76	91.12
Below poverty	27.44	17.24	8.88
	100.00	100.00	100.00

3. Multiply 1970 Census figures by the 1979-1970 CPS ratios:

$$\begin{aligned} 91.12/82.76 \text{ X } 7256 &= 7989 \\ 8.88/17.24 \text{ X } 2744 &= \underline{1413} \\ & \ 9402 \end{aligned}$$

4. Normalize percents to sum up to 100.0%:

   7989/7402 = 84.97 above poverty
   1413/9402 = 15.03 below poverty

   15.03% would be the new poverty ratio to apply to total population. For Colorado, the ratio is approximately 9.4%.

5. Ratios for racial/ethnic groups are based on racial/ethnic ratios in the Job Service applicant file.

WELFARE RECIPIENTS

Used 1979 welfare recipient data from the Department of Health and Human Services for the State of Colorado and counties. These figures were divided by the 1979 estimated population to determine the proportions of welfare recipients; these ratios were applied to the estimated population, e.g.:

1. $$\begin{array}{l} \text{1979 welfare recipients} \\ \text{1979 Colorado population} \end{array} \quad \frac{79354}{2731000} = .02906$$

2. 1982 estimated State population X .02906, i.e., 3092310 X .02906 = 88030 (number of welfare recipients in State, 1982)

To determine the county totals of welfare recipients:

$$\frac{\text{1979 county welfare recipients}}{\text{1979 State welfare recipients}} \text{ X 1980 estimated State welfare recipients}$$

For example, for Adams County:

$$\frac{7870}{79354} \text{ X } 88030 = 8729$$

TOTAL NUMBERS OF INDIVIDUALS UNEMPLOYED DURING THE YEAR

Utilizing national data from Employment and Earnings, determined the ratio of total unemployed to average number of unemployed for the years 1969-1978, e.g.,

$$\text{TOTAL UNEMPLOYED} \quad \frac{16928200}{541530} = .031260$$

This ratio was multiplied by the estimated 1982 average unemployed during the year, e.g., 51410 X .031260 = 160708.

THE MAJOR CAVEAT IN THESE ESTIMATING PROCEDURES IS THAT THE ASSUMPTIONS OF CHANGE ARE PREDICATED ON NATIONAL CHANGES WHICH ARE EXTENDED TO LOCAL AREAS.

HOWEVER, THE ANALYSTS FEEL CONFIDENT THAT THE ESTIMATES ARE RELATIVELY MORE REFLECTIVE OF THE ECONOMY THAN IS THE 1970 CENSUS FOR 1982 PLANNING.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS UNDER DEFENSE MANPOWER POLICY No. 4B (DMP-4B) AND EXECUTIVE ORDERS 10582 and 12073

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts. The criteria used in determining eligible labor surplus areas implement amendments to the Small Business Act (PL 95-89) as well as Defense Manpower Policy No. 4B, Executive Order 10582 (implementing the Buy American Act) and Executive Order 12073 (Federal Procurement in Labor Surplus Areas). The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

CLASSIFICATION CRITERIA

Under the classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

In addition, a "floor" and "ceiling" unemployment rate of 6 percent and 10 percent, respectively, is also continued. The "floor" is established in order to assure that during periods of low unemployment, only those areas with recognized high unemployment will be classified as labor surplus areas. The "ceiling" concept is established in order to assure procurement preference to areas of high unemployment during periods when the national unemployment rate is also very high.

The "floor" concept would become operative whenever the national unemployment rate during the reference period drops below 5.0 percent (i.e., 5.0 times 1.20 equals the 6.0 "floor"); the "ceiling" concept would become effective whenever the national unemployment rate during the reference period rises to 8.3 percent or more (i.e., 8.3 times 1.20 equals the 10.0 "ceiling").

The classification procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency.

Until October 1, 1981, the Assistant Secretary for Employment and Training shall make determinations of unemployment rates, in classifying labor surplus areas, for those jurisdictions in Standard Metropolitan Statistical Areas (SMSAs) for which Current Population Survey (CPS) data were used to determine annual unemployment data prior to January 1, 1978. The intent of this is to assure that the eligibility of such areas is not immediately affected adversely by the change in the unemployment estimating procedures involving the discontinuation of separate CPS estimates for these areas.

Labor surplus areas are defined on the basis of discrete civil jurisdictions, i.e., counties, county equivalents, and cities with a population of at least 50,000. In 4 States (Michigan, New Jersey, New York and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The reference period used in making the classification is an average of the previous two calendar years. By using an average of 24 months of data in place of the previous 12 month moving average, contracts can be targeted into areas experiencing high structural unemployment.

ELIGIBILITY DETERMINED ANNUALLY

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annnual listings are effective each June 1 and remain in effect for the following 12 months.

The national average unemployment rate during the 24 month reference period used in classifying the current list of labor surplus areas (i.e., the period from January 1978 through December 1979) was 6.0 percent. Areas were included in the annual listing if their average unemployment rate during the reference period was 7.2 percent or more (i.e., 1.20 times the national rate). The initial list of 1,013 eligible labor surplus areas became effective June 1, 1980 and will remain in effect through May 31, 1981.

USDOL, ETA, Oct-Dec. 1980

LABOR SUPPLY CLASSIFICATIONS AND SUMMARY LABOR FORCE DATA FOR MAJOR LABOR AREAS, THIRD QUARTER 1980

LABOR SUPPLY CATEGORIES

Each quarter the Department of Labor classifies 150 major employment centers according to the adequacy of their labor supply. A letter classification code, shown below, is assigned to each of these 150 areas.

LABOR SUPPLY CATEGORY	*Description*	*Unemployment Rate 1/*
Group A	*Excessive labor shortage*	*Less than 1.5%*
Group B	*Serious labor shortage*	*1.5 to 2.9%*
Group C	*Moderate labor shortage*	*3.0 to 5.9%*
Group D	*Moderate labor surplus*	*6.0 to 8.9%*
Group E	*Serious labor surplus*	*9.0 to 11.9%*
Group F	*Excessive labor surplus*	*12.0 or more*

1/ Ratio of unemployment to area's total labor force.

BACKGROUND

The categories used in classifying major labor areas according to the adequacy of labor surplus represent a continuation of a system which has been in operation for over 25 years. Although modifications have been made in the system from time to time, the present labor supply categories as indicated above are basically unchanged since May 1955.

Although the system for classifying major labor areas on the basis of labor supply has been in operation for many years, the procedures used in making the labor supply classifications were changed as a result of revisions made in DMP--4B in March 1978.

Under the new system, the labor supply classifications are now done on a quarterly basis rather than monthly as was done prior to the DMP--4 revisions. As a result of this change, the classifications are now based upon the average of the area's labor force data for the 3 months comprising the most recent quarter. This may be contrasted with the previous system under which the monthly labor supply classifications were based on the area's current monthly labor force data as well as the anticipated employment and unemployment outlook over the next 2 months.

The previous system also took account of temporary and seasonal changes in the labor force data in making the labor supply classifications. Under the new system, no attempt is made to analyze the factors responsible for an area's unemployment situation. Thus, the assignment of an area to a specific labor supply category reflects only the severity of the quarter's average unemployment.

COLORADO		Unemployment Rate 1980 Quarters III	 II	 I	 1979 Quarters IV	 III
Colorado Springs	D	6.7	6.3	5.2	5.4	5.4
*Denver-Boulder	C	5.6	4.9	4.2	4.3	4.2
Fort Collins	C	5.2	4.9	4.0	3.9	3.5
Greeley	D	6.1	6.0	5.2	4.2	3.7
Pueblo	E	9.4	8.6	6.6	7.0	7.0

Because of the changes introduced in classifying areas on the basis of labor supply, it may not be possible to compare the new labor supply classfications with historical data which have been published over the past several years.

The labor supply classifications provided in this issue cover the third quarter of 1980. These classifications are based upon the average labor force data for the months of July, August and September 1980. Following is a comparison of the labor supply classifications for the three quarters of 1980 and the last two quarters of 1979.

LABOR SUPPLY GROUP	Third Quarter 1980	Second Quarter 1980	First Quarter 1980	Fourth Quarter 1979	Third Quarter 1979
Total All Groups	150	150	150	150	150
Group A	0	0	0	0	0
Group B	0	0	0	2	1
Group C	32	50	62	90	94
Group D	85	72	65	50	48
Group E	22	21	19	7	6
Group F	11	7	4	1	1

Classifications of major labor areas in the third quarter of 1980 continued their downward trend. There were fewer areas in labor shortage Group C and many more in labor surplus Groups D-F. Between the second and third quarters of 1980, the number of labor areas in labor supply category C dropped more than one-third; those in Group D increased by almost one-fifth; the number in Group F increased by four areas.

Between the third quarter of 1979 and the third quarter of 1980, the number of major areas in Group C declined by almost two-thirds; the number in Group D increased by more than three-fourths. Both Group E and F showed large increases.

The third quarter of 1980 labor supply classifications plus labor force data for the 150 major labor areas and other areas are provided in the table following this section.

LABOR MARKET AREAS

A "labor market area" means a geographic area in which there is a concentration of economic activity of labor demand and in which workers can readily change jobs without changing their place of residence. Labor areas usually include one or more entire counties, except, in New England where towns are considered the major geographical units.

The largest labor market areas are referred to as major labor areas. Major labor areas usually have at least one central city with a population of 50,000 or more. In most instances boundaries of major labor areas coincide with those of Standard Metropolitan Statistical Areas as determined by the Office of Management and Budget in consultation with a Federal interagency committee.

Geographical boundaries of all classified areas are listed in the Employment and Training Administration publication entitled Directory of Important Labor Areas. Revisions in labor area boundaries are listed in the Area Trends.

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC: (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Employed - those individuals, 16 years old or older, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive order - a formal document issued by the President of the United States (or in Colorado, the governor) which has the force of law. Executive orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local office has been hired by an employer and has entered the job.

HEW - the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education)

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

Job Development contact - the process of soliciting a public or private employer's order for a specific applicant for whom the local office has no suitable opening currently on file.

LMA - Labor market area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultural-establishment employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement" (q.v.). This term is applied to WIN registrants only.

Placement - the hiring by an employer of an individual referred by a Job Service Center for a job or an interview, provided the Job Service completed all of the following steps: (1) made prior arrangements with the employer for the referral of one or more individuals; (2) referred an individual who had not been specifically designated by the employer for referral; (3) verified from a reliable source (preferably the employer) that the individual has entered on the job; and (4) prepared a job order form prior to referral and recorded the placement on the appropriate forms.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC - standard industrial classification

SMSA - standard metropolitan statistical area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN - Work Incentive Program
